Subject: PHASE I AND LIMITED PHASE II ENVIRONMENTAL SITE ASSESSMENT REPORT
SHELDON FARMS – APN: 116-0012-051 AND 116-0012-059
SHELDON ROAD AT BRUCEVILLE ROAD
ELK GROVE, SACRAMENTO COUNTY, CALIFORNIA

Dear Mr. Ragland:

In accordance with your request and our proposal LS-17-302 dated October 5, 2017, we have performed this Phase I and Limited Phase II Environmental Site Assessment (ESA) of a property located south of Sheldon Road between Lewis Stein and Bruceville Roads (the Site) in Elk Grove, Sacramento County, California. We performed the Phase I and Limited Phase II ESA for Anthem United Homes (the Client) to assess the potential for existing hazardous substances and/or petroleum product impacts at the Site prior to purchasing and developing the Site.

This report summarizes the findings of the Phase I ESA and Limited Phase II ESA including the potential presence of recognized environmental conditions as defined by the American Society for Testing and Materials *Designation E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*.

We appreciate the opportunity to have performed this Phase I and Limited Phase II ESA for Anthem United Homes. Please contact us if you have any questions concerning this report or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

Nicole Hastings-Bethel
Project Environmental Scientist

John Juhrend, PE, CEG
Senior Engineer

PHASE I AND LIMITED PHASE II ENVIRONMENTAL SITE ASSESSMENT REPORT

1.0 INTRODUCTION

This report summarizes the methodology and presents the findings of a Phase I and limited Phase II Environmental Site Assessment (ESA) of a property located south of Sheldon Road between Lewis Stein and Bruceville Roads (the Site) in Elk Grove, Sacramento County, California. We performed the Phase I and Limited Phase II ESAs for Anthem United Homes (the Client) to assess the potential for existing hazardous substances and/or petroleum product impacts at the Site prior to the Client purchasing and developing the Site.

1.1 Purpose and Objectives

The purpose of the Phase I ESA was to identify evidence or indications of 'recognized environmental conditions' (REC) as defined by the American Society for Testing and Materials (ASTM) *Designation E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* Section 1.1.1 of ASTM *Designation E 1527-13* defines an REC as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions." De minimis conditions are those that generally do not present a threat to human health or the environment and that generally would not be the subject of the enforcement action if brought to the attention of appropriate governmental agencies.

ASTM *Designation E1527-13* also defines 'Historical' and 'Controlled' RECs (HREC and CREC, respectively). An 'Historical REC' is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to " the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." A 'Controlled REC' is defined as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." An HREC is not an REC if a property meets current standards for unrestricted residential use. A CREC remains an REC by definition when the property does not meet the unrestricted residential use requirement unconditionally.

We also conducted the Phase I ESA in general accordance with the requirements of 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries,* as required under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting an all appropriate inquiries investigation into the previous ownership and uses of a property is to meet the provisions necessary for the landowner, contiguous property owner, and/or bona fide prospective purchaser to qualify for certain landowner liability protections under CERCLA.

The following principles are an integral part of ASTM *Designation E1527-13*:

> ***"Uncertainty Not Eliminated*** - No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost."
>
> ***"Not Exhaustive*** - All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information."
>
> ***"Level of Inquiry is Variable*** – Not every property will warrant the same level of assessment. Consistent with good commercial and customary practice, the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry."

1.2 Scope of Services

Our Proposal No. LS-17-302 dated October 5, 2017 describes the scope of services for this Phase I and limited Phase II ESA. We performed the scope of services outlined in the proposal with the exception that we did not review Sanborn Fire Insurance Maps (Sanborn maps). Environmental Data Resources, Inc. (EDR) confirmed that Sanborn map coverage does not exist for the Site.

The main components of the Phase I ESA and their objectives, as specified by the referenced standards, include the following:

- **Physical Setting:** We reviewed physical setting references to obtain information concerning the topographic, geologic, and hydrogeologic characteristics of the Site and vicinity. Such information may be indicative of the direction and/or extent that a contaminant could migrate in the event of a spill or release.

- **Records Review:** We reviewed publicly available Federal, State, and local regulatory agency records to obtain information that could potentially help identify RECs at or potentially affecting the Site.
- **Site History:** We reviewed historical references to assess the history of previous uses of the Site and surrounding area to identify those that could have led to RECs on or near the Site. Historical sources reviewed included aerial photographs, topographic maps, and city directories. In addition, we conducted interviews with persons who were expected to be reasonably knowledgeable about historical and/or current conditions at and uses of the Site.
- **Site Reconnaissance:** We performed a site reconnaissance to observe site conditions and activities for indications of evidence of RECs. The site reconnaissance was for the Site only. Offsite properties and features were viewed solely from the vantage of the Site and public thoroughfares.

1.3 Report Limitations

We prepared this Phase I and limited Phase II ESA report exclusively for the Client. The information obtained is only relevant for the dates of the records reviewed or as of the date of the latest site visit. Therefore, the information contained herein is only valid as of the date of the report and will require an update to reflect recent records/site visits.

The Client should recognize that this report is not a comprehensive site characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the site reconnaissance, a review of the specified regulatory records, and a review of the historical usage of the Site, as presented in this report. The Client should also understand that wetlands, asbestos-containing building materials, lead-containing paint, lead in drinking water, radon, mercury related to mining activities, methane, and mold surveys were not included in the scope of services for this Phase I ESA.

Therefore, the report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the report is implied within the intent of this report or any subsequent reports, correspondence or consultation, either express or implied. We strived to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

1.4 Data Gaps

A data gap is defined by ASTM *Designation E 1527-13* as "a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information." Data gaps could include such things as insufficient historical information, the inability to interview persons with direct site knowledge (e.g., the owner(s), past owner(s), tenants, workers, etc.) or the lack of access to all parts of a site during the site reconnaissance.

As stated in Section 1.2, we did not review Sanborn maps for the Site since they are not available for the Site and vicinity. However, based on our review of other historical information, we do not consider the lack of Sanborn map coverage a data gap.

2.0 SITE DESCRIPTION

This section provides information regarding the location and physical characteristics of the Site including its size, topography, geologic, soil, and hydrogeologic conditions.

2.1 Location and Legal Description

The Site is located south of Sheldon Road between Lewis Stein and Bruceville Roads in Elk Grove, Sacramento County, California (Figure 1). The Site is depicted on the United States Geological Survey's (USGS) Florin, California, 7.5-minute topographic map (USGS, 1980) in the northeastern quarter of Section 27 of Township 7 North, Range 5 East, Mount Diablo Base and Meridian.

The Site is further identified by Sacramento County Assessor's Parcel Numbers 116-0012-051 and 116-0012-059. A parcel map depicting the Site is in Appendix A.

2.2 Site and Vicinity General Characteristics

The approximate 98-acre Site is graded vacant land. Figure 2 shows the site boundaries and site features. The Site is in an area with commercial, residential, and recreational land uses (Figure 2).

2.2.1 Topography

The USGS Florin topographic map (USGS, 1980) shows the Site as relatively flat-lying at an elevation of approximately 25 feet above mean sea level.

2.2.2 Geologic Conditions

The site is located in the southern Sacramento Valley portion of the Great Valley Geomorphic Province of California. The Sacramento Valley is a broad lowland bounded by the Sierra Nevada mountain range to the east and the Coast Ranges to the west. The Sacramento Valley has been filled with a thick sequence of alluvial sediments derived from weathering of the adjacent mountain ranges resulting in a stratigraphic section of Cretaceous, Tertiary and Quaternary deposits.

Based on the *Preliminary Geologic Map of the Lodi 30' x 60' Quadrangle, California*, California Geological Survey (CGS), 2009, the site is underlain by the Pleistocene Middle Unit of the Riverbank Formation, which is a quaternary alluvial soil deposit consisting of interbedded layers of sand, silt, and clay.

2.2.3 Soil Conditions

We performed a geotechnical investigation of the Site in October 2017, which included excavating ten trenches to a depth of 9 feet. Soil encountered at the Site consisted of 6-inches of tilled surface soil over a stiff to moderately cemented sandy clay with clayey sand lenses. No field indications of apparent contamination (i.e. staining, ordors, debris, etc.) were observed.

We obtained information concerning soil conditions in proximity to the Site from the United States Department of Agriculture – Natural Resources Conservation Service Web Soil Survey Web Soil Survey (http://websoilsurvey.nrcs.usda.gov/app/HomePage.htm). Web Soil Survey information indicates that surficial onsite soil is classified as San Joaquin silt loam which is a silt loam to clayey loam that formed on alluvium derived from granite.

2.2.4 Hydrologic and Hydrogeologic Conditions

Site-specific information regarding groundwater occurrence and flow direction is not available. Therefore, to assess local groundwater conditions for the site vicinity we reviewed local data from the California Department of Water Resources Groundwater Information Center, through the Interactive Map Application (https://gis.water.ca.gov/app/gicima/#bookmark_DepthBelowGroundSurface). Data was available from Spring 2011 to Spring 2017. Groundwater flow was generally to the west-southwest at depths ranging between approximately 50 and 60 feet.

2.3 Current and Planned Uses of the Site

The Site is vacant and not used for any purpose. The Client plans to develop the Site for residential use.

2.4 Current Uses of Adjoining Properties

The Site is bound by Bruceville Road to the west, Sheldon Road to the north, and Lewis Stein Road to the east. Two shopping centers, each including a gas station are located east beyond Lewis Stein Road and northwest beyond Bruceville Road. Residential development is present north, west, and east of the Site. Laguna Creek is adjacent to the south of the Site. Further description of adjoining properties is in Section 6.0.

3.0 USER–PROVIDED INFORMATION

This section summarizes user (Client)-provided information regarding the Site provided by David Ragland with Anthem United Homes. We asked Mr. Ragland if he knew of previous environmental reports or documents that may exist and, if so, whether copies could be provided. We also asked if he had knowledge of legal or administrative proceedings involving the Site. Mr. Ragland completed a User Questionnaire regarding these items, summarized below, a copy of which is in Appendix B.

3.1 Title, Appraisal and Sale Agreement Records

Mr. Ragland provided a preliminary title report for the Site. No items were noted indicating an environmental concern at the Site.

3.2 Environmental Liens or Activity and Use Limitations

Mr. Ragland indicated that he was not aware of any environmental liens or activity and use limitations for the Site.

3.3 Specialized Knowledge

Mr. Ragland has no specialized knowledge regarding uses of the Site that could potentially impair or have impaired the environmental conditions of the Site.

3.4 Commonly Known or Reasonably Ascertainable Information

Mr. Ragland has no commonly known or reasonably ascertainable information unique to the Site.

3.5 Valuation Reduction for Environmental Issues

Mr. Ragland is not aware of any environmental conditions on the Site which could lead to a potential valuation reduction for the Site.

3.6 Owner, Property Manager, and Occupant Information

Ownership of the property is held by the following entities:

- George Quan and Sons, a California general partnership, as to an undivided 22.223% interest;
- CBP Sheldon Road, LLC, as to an undivided 11.111% interest;
- Brodovsky-Sheldon Road, LLC, a California Limited Liability Company, as to an undivided 11.111% interest;
- Sheldon LAS, LLC, a California Limited Liability Company, as to an undivided 22.222% interest;
- LBDB Sheldon Road, LLC, a California limited liability company, as to an undivided 11.111% interest; and
- Friedlander Sheldon Farms, LLC, a California limited liability company, as to an undivided 22.222% interest.

The property is currently fallow farmland with no structures. The owners' attorney, Allen D. Hine, completed the owner questionnaire, answered supplemental questions about the Site, and provided us with a Phase II ESA summarized in Section 3.8. Information provided by Mr. Hine is summarized in Section 7.0.

3.7 Reason for Performing Phase I ESA

The Client requested the Phase I ESA to obtain information regarding the potential for existing hazardous substances and/or petroleum product impacts at the Site prior to purchasing and developing the Site.

3.8 Previous Investigations

Mr. Ragland provided us with Tetra Tech EM's (Tetra Tech) *Summary Report of Phase I Environmental Site Assessment (October 29, 2004) Sheldon Farms*, well closure documents for a former onsite well, a *Biological Resources Assessment* prepared in February 2006 by Foothill Associates, and a *Geotechnical Engineering Report, Sheldon Ranch* prepared in December 2004 by Wallace, Kuhl and Associates.

According to the Phase I summary, Tetra Tech identified no RECs associated with the Site (Appendix C). According to the well closure documents, a 146-feet-deep irrigation well installed sometime in the 1950s and located on the Site along Lewis Stein Road approximately 1,120 feet south of Sheldon Road was abandoned under permit using explosives in August 2009 (Appendix C). According to the biological assessment, the Site is primarily disturbed (tilled) non-native annual grassland. No items in the biological assessment were identified that would suggest potential RECs at the Site. The geotechnical report identified a stockpile, approximately 500 feet by 500 feet and 8 feet high on the "east central portion of the Site." Based on aerial photographs of the Site, the stockpile appears to have come from rechanneling and construction of recreational paths in the 1990s along Elk Grove Creek adjacent to the south of the Site and is not likely to create an REC at the Site. An elevated area, possibly remnants of the former stockpile, is still present in this approximate location, as described in Section 6.0.

Mr. Hine provided us with Youngdahl Consulting Group, Inc.'s (Youngdahl) *Sheldon Farms Phase II Environmental Site Assessment* dated July 5, 2016. According to the report, Youngdahl prepared a Phase I ESA for the Site and identified the former (upgradient) Fresh and Save Cleaner, located east of Lewis Stein Road at 8112 Sheldon Road, Suite 800 as a possible REC, though they did not identify a release or any cleanup actions associated with the drycleaner. Youngdahl collected four soil vapor samples on the Site, located adjacent and parallel to Lewis Stein Road, downgradient from the drycleaner, at a depth of approximately 4.9 feet. Volatile organic compounds (VOCs) were detected in the soil vapor samples collected, however no VOC concentrations were detected at or greater than the San Francisco Regional Water Quality Control Board Environmental Screening Levels for soil vapor in a residential setting. Additionally, tetrachloroethylene (PCE) and trichloroethylene (TCE), primary VOCs associated with drycleaner releases, were not detected. Additional investigation was not recommended. Youngdahl's report is in Appendix C.

4.0 RECORDS REVIEW

This section summarizes information we obtained through review of readily available agency records for the Site and properties and facilities in the surrounding vicinity.

4.1 Standard Environmental Record Sources

EDR searched federal, state, and local environmental databases for listings pertaining to the Site and properties/facilities within one mile of the Site. The following table shows the databases that list the Site and/or offsite properties/facilities and the total number of listed properties/facilities for each database. *The EDR Radius Map Report with GeoCheck*, dated October 11, 2017, is in Appendix D and provides a comprehensive listing of the databases searched.

Database Name	Search Radius (Miles)	Number of Listings
STATE, LOCAL, AND TRIBAL DATABASES		
Department of Toxic Substances Control [DTSC] Site Mitigation and Brownfields Reuse Program (ENVIROSTOR)	1.0	5
Leaking Underground Storage Tank (LUST)	0.5	1
Sacramento County Toxic Clean-up Sites List (Sacramento Co. CS)	0.5	2
Underground Storage Tank (UST)	0.25	2
Aboveground Storage Tank (AST)	0.25	1
Voluntary Cleanup Program (VCP)	0.5	1
ADDITIONAL ENVIRONMENTAL RECORDS		
SWRCY – recycler database	0.5	1
DRYCLEANERS – drycleaner facilities	0.25	2
HIST CORTESE – hazardous waste and substances property list	0.5	1
Sacramento County Master List (Sacramento Co. ML)	0.25	9
EDR HIGH RISK HISTORICAL RECORDS		
EDR Exclusive Historic Gas Stations (EDR Hist Auto)	0.125	2
EDR Exclusive Historic Cleaners (EDR Hist Cleaners)	0.125	1

4.1.1 Site

The Site is not listed on any of the databases searched by EDR.

4.1.2 Offsite Properties

There are no identified facilities within ¼-mile of the Site on a release database. Nine facilities are listed on non-release[1] databases and are not likely to have caused an REC at the Site. Two of these

[1] "Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment - i.e. the ground surface, soil, soil vapor, groundwater, or surface water on a property. "Release database" refers to those which provide

facilities are gas stations, Chevron is located 125 feet east of the Site, and Shell is located 175 feet north of the Site. The gas stations are located cross or downgradient to the Site and were constructed in the early 2000s, and therefore unlikely to create an REC at the Site.

A drycleaner, Fresh and Save Cleaner was located approximately 200 feet east and upgradient of the Site. This facility opened in the mid-2000s and operated until sometime prior to 2016. The facility was registered with the United States Environmental Protection Agency (EPA) and Sacramento County and has not reported a release. As summarized in Section 3.8, Youngdahl conducted a soil vapor survey investigation on the Site downgradient of the former drycleaner and did not identify any impacts. The former drycleaner is therefore unlikely to create an REC at the Site.

4.2 Orphan Summary

The Orphan Summary identifies facilities that have incomplete address information and could not be specifically plotted. The Orphan Summary lists five properties that are greater than 2,000 feet from the Site. Based on their distance from the Site, none of these properties are expected to have caused an REC at the Site.

4.3 Other Environmental Record Sources

4.3.1 GeoTracker and EnviroStor

We reviewed information available on GeoTracker and the California Department of Toxic Substances Control's (DTSC) EnviroStor (http://www.envirostor.dtsc.ca.gov/public/) database for information regarding environmental assessment and cleanup at the Site and/or properties/facilities within ¼ mile of the Site. No information for the Site or properties/facilities within ¼ mile of the Site is available on GeoTracker.

The Kalwani Property, located approximately 1,000 feet northeast (crossgradient) of the Site, was identified on the Envirostor database as a closed VCP case. According to the no further action letter from the DTSC, oil contaminated soil was removed from the property and cleared for residential use. Based on the distance from the Site and release to soil only, this release is not likely to have caused an REC at the Site.

4.3.2 Sacramento County Environmental Management Department

We requested to review records pertaining to the Site (if any) that Sacramento County Environmental Management Department (SCEMD) has. The SCEHD provided a hazardous materials incident report and well destruction records for the Site. The hazardous materials incident report, dated September 2002, concluded that a water softener fell off a vehicle and deposited a white powder (salt) onto the

---

information regarding an unauthorized release. "Non-release database" refers to those that may report use, storage, or disposal of hazardous substances and/or petroleum products or other environmental conditions, but do not report releases of such.

side of the road adjacent to the Site. The fire department removed the material and the incident does not present an REC for the Site.

The SCEMD records for the well destruction match the records provided by the client, as summarized in Section 3.8 and included in Appendix C.

4.3.3 Sacramento County Agricultural Commission

We requested to review records pertaining to the Site (if any) that Sacramento County Agricultural Commission (SCAC) has. The SCAC stated their records date back to 2008 and during this time, there is no record of pesticide use for the Site.

4.3.4 DOGGR

We reviewed the State of California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) online mapping system for information regarding the location and status of any oil or natural gas exploration or production at or in the vicinity of the Site. The DOGGR online mapping system does not show any oil or gas wells on Site. The nearest well, J.P.Kramer 1, is depicted approximately 1,900 feet southeast (upgradient) of the Site. According to the well abandonment report, the well was installed to a depth of 6,452 feet in February and abandoned in March of 1953 (DOGGR, 2017). There are no production records for the well, and given the short period of time between installation and abandonment, it is unlikely to have been used for production. Given the distance from the Site, lack of production records or time for production between installation and abandonment, the former well is unlikely to cause an REC for the Site.

5.0 HISTORICAL USE

We evaluated the historical use of the Site and adjacent properties through review of historical aerial photographs, historical topographic maps, and city directories provided by EDR. This section summarizes the information obtained from these sources.

5.1 Aerial Photographs

We reviewed historical aerial photographs for the years 1937, 1947, 1957, 1964, 1966, 1972, 1984, 1993, 1998, 2005, 2006, 2009, 2010, and 2012 (Appendix E) for indications of past land uses that had the potential to have impacted the Site through the use, storage or disposal of hazardous substances and/or petroleum. The following table summarizes our observations of the Site and adjacent properties on the aerial photographs.

Year	Observations	
	Site	**Adjacent Properties**
1937 (1" = 500')	A creek extends through the northern portion of the Site. It appears as though row crops were along the southern portion of the creek. The remainder of the Site appears to be grassland.	Sheldon Road was adjacent north and Bruceville Road was adjacent to the west of the Site beyond which were farms with row crops, grasslands, and an apparent residences. Grasslands were adjacent to the south and east of the Site. A creek was also adjacent south of the Site.
1947 (1" = 500')	The creek no longer extended through the northern portion of the Site. The western and southern portions of the Site were apparent row crops and the remainder of the Site appeared to be grasslands.	Conditions were similar to those observed on the 1937 photograph; however, the creek south of the Site appeared more channelize or controlled.
1957 (1" = 500')	Nearly the entire Site was row crops.	Conditions were similar to those observed on the 1947 photograph except an orchard northeast of the Site.
1964, 1966, and 1972 (1" = 500')	Conditions were similar to those observed on the 1957 photograph.	Conditions were similar to those observed on the 1957 photograph.
1984 (1" = 500')	Conditions were similar to those observed on the 1972 photograph.	Row crops and the orchard are no longer visible north of the Site but additional residential development was apparent.
1993 (1" = 500')	The entire Site appeared to be grassland.	Conditions were similar to those observed on the 1984 photograph.
1998 (1" = 500')	Grading or an access road is visible extending from southeast of the Site onto the south and eastern portions of the Site. Likely related to the start of the channelization of Laguna Creek.	Conditions were similar to those observed on the 1993 photograph with the exception of grading near the creek southeast of the Site extending west and north.
2005 and 2006 (1" = 500')	A stockpile is visible on the southeastern portion of the Site.	A dirt road and channelization of Laguna Creek is visible south of the Site. Lewis Stein Road was adjacent to the east beyond which was a shopping center, gas station, and residential development. A gas station and shopping center was north of Sheldon road, and residential development was west of Bruceville Road.
2009, 2010, and 2012 (1" = 500')	Conditions were similar to those observed on the 2006 photograph.	Conditions were similar to those observed on the 2006 photograph with the exception of additional residential development north of Sheldon Road.

We additionally viewed aerial photographs between 1993 and 2017 on Google Earth. The stockpiled soil visible on the Site in 2005 appears to be from channelization and trail creation work completed south and east of the Site along Laguna Creek and is not considered to have likely created an REC at the Site. No additional land uses that would suggest the presence of RECs were visible on the Site or adjacent properties in the aerial photographs.

5.2 Topographic Maps

We reviewed historical topographic maps for the years 1894, 1909, 1941, 1947, 1953, 1968, 1975, 1980, and 2012 (Appendix F). The following table summarizes our observations of the Site and adjacent properties on the historical topographic maps.

Year	Observations	
	Site	**Adjacent Properties**
1894 (1: 125,000)	No structures or land uses depicted on the Site.	A road is depicted adjacent to the north of the Site extending east. No structures or other land uses are depicted on the adjacent properties.
1909 (1: 24,000)	Similar to conditions depicted on the 1894 map.	Similar to conditions depicted on the 1894 map except the road north of the Site extends west and then south along the western boundary of the Site.
1941 (1: 62,500)	Similar to conditions depicted on the 1909 map.	Laguna Creek is depicted along the southwestern portion of the Site extending northwest to southeast away from the Site. Dwellings are depicted across Sheldon Road north of the Site. Highway 99 is depicted east of the Site.
1947 (1:24,000)	Similar to conditions depicted on the 1941 map.	Similar to conditions depicted on the 1941 map.
1953 (1: 24,000)	Similar to conditions depicted on the 1947 map except a branch of Laguna Creek is depicted extending through the center of the Site.	Similar to conditions depicted on the 1947 map except an orchard is depicted north of Sheldon Road near the eastern portion of the Site.
1968 (1: 24,000)	"Well 29" is depicted on the eastern edge of the Site.	Similar to conditions depicted on the 1953 map.
1975 (1: 24,000)	Similar to conditions depicted on the 1968 map.	Similar to conditions depicted on the 1968 map.
1980 (1: 24,000)	Similar to conditions depicted on the 1975 map.	Similar to conditions depicted on the 1975 map.
2012 (1:24,000)	Land use features are not depicted on the Site.	Land use features are not depicted on the Site. Lewis Stein Road is depicted adjacent to the east of the Site.

The topographic maps do not depict features or land uses that directly suggest the presence of RECs on the Site or adjacent properties.

5.3 City Directories

EDR prepared an abstract of city directories including city, cross reference and telephone directory listings (Appendix G). EDR included information for Sheldon Road and Bruceville Road from directories at approximate 5-year intervals, if available, from 1970 to 2013. The Site is not listed on the city directories dating back to 1970. Surrounding properties were primarily listed as residential until 2003 when retail and commercial businesses are listed. The Sheldon Road Chevron is only listed in 2013. No adjacent properties are listed on the city directories that are likely to create an REC at the Site.

6.0 SITE RECONNAISSANCE

This section summarizes our observations of the Site and surrounding properties made during the site reconnaissance.

6.1 Methodology and Limiting Conditions

Nicole Hastings-Bethel, Project Environmental Scientist with Geocon, performed a site reconnaissance on October 16, 2017. Ms. Hastings-Bethel performed the site reconnaissance unaccompanied by walking and driving throughout the Site and along the site perimeter to observe site features and conditions. The offsite survey was performed by making observations of adjacent properties from the Site and public roads.

Weather on the day of the site reconnaissance was sunny with temperatures in the 80s°F. Photographs of various site features and offsite properties are appended.

6.2 Site Setting

The Site is situated in a mixed-use area consisting of residential, commercial, and recreational uses. Laguna Creek has been channelized and a foot trail system is partially developed in this area.

6.3 Onsite Survey

The Site is vacant plowed farmland (Photos 1 through 4). The Site is fenced along the northern and western portions of the Site (Photo 5). A stockpile measuring approximately 200 feet by 375 feet and an average of 4 feet tall was observed on the central-eastern portion of the (Photos 6 and 7). A gate and paved driveway provides access to the Site on the southwestern portion of the Site on Bruceville Road (Photo 4). Various utility boxes are present on the southwestern and southeastern corners of the Site, including former irrigation pump utilities (Photo 8). We did not observe electrical transformers on the Site.

No evidence of RECs was observed on the Site.

6.4 Offsite Survey

Adjacent properties consist of the following:

- North (from west to east) –Shell gas station (Photo 9), residential (Photo 5), veterinary hospital and residential.
- East (from north to south) – Chevron gas station (Photo 10), Winco shopping center, Terracina at Park Meadows Apartments, and Pinkerton Park (Photo 11).
- South – Laguna Creek (Photos 3 and 12).
- West (from north or south) – Laguna Creek Apartments and open space.

No evidence of RECs was observed on the properties adjacent to Site.

7.0 INTERVIEWS

Mr. Hine completed a site owner questionnaire regarding the use, storage, or disposal of hazardous substances and/or petroleum products on the Site. He stated that the Site has been owned by his clients for more than 50 years and it has always been used as farmland or was vacant. They are not aware of any environmental issues related to the Site or adjacent properties. A copy of the site owner questionnaire is in Appendix H.

8.0 LIMITED PHASE II ESA

We conducted a limited Phase II ESA to evaluate the potential presence of organochlorine pesticides (OCPs) and arsenic in onsite surface soil due to the historic agricultural use of the Site. The limited Phase II ESA included collection of surface soil samples from throughout the Site and laboratory analysis for OCPs and arsenic.

8.1 Field Investigation

On October 13, 2017, we collected surface soil samples TP1 through TP10 at the Site at the locations depicted on Figure 2. The soil samples were collected by scooping soil from the upper 6 inches at each sampling location with a clean, stainless steel trowel. The collected soil was then placed in new stainless steel tubes that were labeled with a sample identification number, collection time, and date. Each sample was then placed into a chilled cooler for transport under chain-of-custody to California Laboratory Services (CLS) of Rancho Cordova, California. No soil discoloration, “chemical” odor, or other obvious indication of apparent contamination was observed during the soil sampling.

8.2 Laboratory Analysis and Results

CLS analyzed the soil samples for OCPs by United States Environmental Protection Agency (USEPA) Test Method 8081 and arsenic by USEPA Test Method 6010B. As shown on Table 1, OCPs were not detected in any of the soil samples. Arsenic was detected in all of the soil samples at concentrations ranging from 2.0 to 3.4 milligrams per kilograms (mg/kg).

A copy of the CLS analytical report is in Appendix I.

8.3 Findings of the Limited Phase II ESA

The reported arsenic concentrations exceed the DTSC's Health and Ecological Risk Office (HERO) Note 3 Screening Level for arsenic of 0.11 mg/kg for soil in a residential land use scenario. However, arsenic is a natural mineralogic component of soil and its naturally occurring or “background” concentrations in California soils typically range from 0.6 to 11 mg/kg (Bradford, et al, 1996) and much higher in some areas depending on the mineralogy of the soil’s parent material. Therefore, the DTSC generally allows comparison of arsenic concentrations in soil to naturally occurring background arsenic concentrations instead of the more stringent health risk-based screening levels. All of the reported arsenic concentrations are within the range of naturally occurring arsenic concentrations in California soil.

The results of analysis of the soil samples suggest that agricultural practices at the Site have not impacted soil with pesticides or arsenic. No further assessment of soil on the Site appears to be warranted.

9.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I ESA, in general conformance with the scope and limitations of ASTM *Designation E 1527-13* of Sheldon Farms located south of Sheldon Road between Lewis Stein and Bruceville Roads, Elk Grove, Sacramento County, California. Exceptions to, or deletions from, this practice are described in Section 1.4 of this report. We also performed a limited Phase II ESA to evaluate the potential presence of OCPs and arsenic in surface soil on the Site.

The Phase I ESA has revealed no evidence of RECs in connection with the Site or adjoining properties. The results of our limited Phase II ESA show that OCPs were not detected in the surface soil samples collected at the Site and arsenic is present in the surface soil at the Site at concentrations that are within the range of naturally occurring background. Additional environmental assessment of the Site does not appear to be warranted at this time.

11.0 QUALIFICATIONS

This Phase I ESA report was prepared by Nicole Hastings-Bethel and reviewed John Juhrend, PE, CEG, CEM. Ms. Hastings-Bethel has a BS degree in environmental management and protection with over nine years of experience in the preparation and management of Phase I ESAs and other site investigation activities. Ms. Hastings-Bethel performs research and field sampling programs for Department of Defense sites, industrial sites, commercial/retail areas, residential and agricultural properties.

Mr. Juhrend has over 30 years of experience in the environmental and geotechnical consulting industry in California and Nevada. Mr. Juhrend is a California Professional Engineer and Certified Engineering Geologist, with a BS degree in engineering geology and MS degree in civil engineering. His personal experience includes the performance of hundreds of environmental projects including Phase I and Phase II site assessments, remedial investigations and feasibility studies, corrective action programs and litigation support. His primary expertise includes environmental assessments of Brownfields properties, industrial, commercial and residential properties, and transportation corridors.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries investigation in conformance with the standards and practices set forth in 40 CFR Part 312.

SHELDON FARMS

User Questionnaire

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? none

2. Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?
none

3. Do you have any specialized knowledge related to the property or nearby properties?
no

4. Does the purchase price reasonably reflect the fair market value of the property?
yes!

5. Do you know the past uses of the property?
agricutural / Fallow

6. Do you know of specific chemicals that are present or once were present at the property? no

7. Do you know of spills or other chemical releases that have taken place at the property? no

8. Do you know of any environmental cleanups that have taken place at the property?
none

9. Do you know whether any helpful documents exist and, if so, whether copies can and will be provided for this assessment? These documents may include: Environmental site assessment reports, Environmental compliance audit reports, Environmental permits, Registrations for storage tanks, Registrations for underground injection systems, or any other documents related to the property. 1) WELL ABANDONMENT DOCUMENTS (PROVIDED) 2) FOOTHILL BIOLOGICAL RESOURCE ASSESMENT (2/2006) 3) PHASE I SITE ASSESMENT BY TETRA TECH EM, INC (3/2006 - ATTACHED) 4) WALLACE KUHL GEOTECH REPORT DATED DEC, 2004 (ATTACHED)

March 14, 2006

Mr. Steve Flint
Planning Director
City of Elk Grove Planning Division
8400 Laguna Palms Way
Elk Grove, California 95758

Subject: **SUMMARY REPORT OF**
PHASE I ENVIRONMENTAL SITE ASSESSMENT (OCTOBER 29, 2004)
Sheldon Farms
Sheldon Road and Bruceville Road
Elk Grove, California 95758
Tetra Tech Project: P2261.05.1.NBS0.0001.1A

Dear Mr. Flint:

This Summary Report of Phase I Environmental Site Assessment (ESA) for the above referenced property outlines the course of action performed by Tetra Tech EM, Inc. (Tetra Tech), on behalf of D.R. Horton-Western Pacific Series for the purposes of characterizing environmental conditions as part of site acquisition due diligence in accordance with the American Society of Testing and Materials (ASTM) E 1527-00 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process."

The Phase I ESA is based on the review of readily available information and site and surrounding area observations which are used to identify obvious environmental concerns associated with practices and activities that have occurred on the site or adjacent sites that could potentially contaminate the site. No subsurface evaluation was performed as a part of this assessment.

This report is intended for the use of D.R. Horton, Inc. and its subsidiaries only. Our services have been performed under mutually agreed upon terms and conditions. If other parties wish to rely on this report, please have them contact us so that a mutual understanding and agreement of the terms and conditions for our services can be established prior to their use of this information.

PHYSICAL DESCRIPTION AND SITE RECONNAISSANCE

The target property consisted of three contiguous parcels of vacant, undeveloped land, with one parcel south of, and two parcels north of Laguna Creek, totaling approximately 102 acres. The three parcels were located southeast of the corner of Sheldon Road and Bruceville Road in Elk Grove, Sacramento County, California. The Sacramento County Assessor's parcel numbers for the target property are 116-0012-050, 116-0012-051 and 116-0012-047. The general topographic gradient was gradually to the northwest. A Site Location Map is presented as Figure 1 and a Site Map is presented as Figure 2.

10860 Gold Center Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.852.8300 Fax 916.852.0307
www.ttemi.com

Tetra Tech conducted a site reconnaissance on October 13, 2004. The target property consisted of vacant, undeveloped land covered with native trees and grasses. Miscellaneous debris was observed on the property. Tetra Tech observed two mattresses, children's toys, bricks, concrete and wood (all burned) and two broken public telephone stands, in the central-east portion of the target property. In addition, Tetra Tech observed 6 PVC pipes extending from the ground along the eastern property boundary (Lewis Stein Road). The pipes appeared to be test wells associated with an old agriculture well located south of the test wells. The wells are likely used to test for geotechnical and aquifer dynamics associated with irrigation pumping in the area, and do not represent a recognized environmental condition (REC).

Tetra Tech's site reconnaissance did not indicate any RECs to the target property.

The target property is bordered to the north by a gasoline service station, rural residences, a school, a small housing development, and land that is cleared and graded in preparation for development. The target property is bordered to the east by a gasoline service station, shopping center and apartment buildings; to the south by vacant undeveloped land and office buildings; and to the west by vacant land and apartment buildings. With the exception of the school and single-family residences, located north of the target property, all structures appear to have been built after 1993, according to the 1993 aerial photograph.

HISTORICAL REVIEW

According to Mr. Carl Stein, a current member of the tenancy-in-common, and the aerial photographs and topographic maps available for the target property, historical use of the property has generally consisted of rural residential and undeveloped land on the southern parcel and agriculture on the northern parcels. Based on Tetra Tech's review of historical resources, the residence was removed between 1964 and 1968.

REGULATORY REVIEW

Tetra Tech conducted a database search of information published by Environmental Data Resources, Inc. (EDR) of various state and federal regulatory agencies for the target property and adjacent and surrounding properties. Tetra Tech also contacted local and municipal agencies to determine if the target property or nearby properties are listed as having a past or present record of actual or potential environmental impact or are under investigation for an environmental impact.

The target property was not identified by the federal government as a listed site requiring remedial action under the Comprehensive Environmental Response, Compensation and Liability Act or any other federal, state, or local environmental regulations.

Two facilities located within a one mile radius of the target property were listed on state and federal databases. According to EDR, a property located between ½ mile and 1 mile northeast of the target property was listed on the State Voluntary Cleanup Program list (VCP list) due to a waste oil release in 1996. No further action was required by the Department of Toxic Substances Control (DTSC) in 1997. Additionally, one orphan Emergency Response Notification System (ERNS) site is located between ½ mile and 1 mile northeast of the target property, and may be the same site as the above-mentioned VCP site. Neither site is up gradient from the target property, or is expected to affect environmental conditions at the target property.

The adjacent gasoline service stations observed during the site reconnaissance appeared to be newly constructed and are not listed in the EDR databases. Tetra Tech reviewed the California State Water Resources Control Board's GeoTracker website for Leaking Underground Storage Tank cases associated

with the facilities; neither facility was listed. Accordingly, these facilities do not present a REC to the target property.

CONCLUSIONS

Tetra Tech performed this assessment in general conformance with the scope and limitations of ASTM E 1527-00 of the target property to identify any RECs in connection with the property including the presence, or likely presence, of any hazardous substances or petroleum products on the target property under conditions that indicate an existing release, a past release, or a material threat of a release into structures on the target property or into the ground, groundwater, or surface water. This assessment included an evaluation to the extent practicable of the past and present land uses at the target property and on adjacent properties.

This assessment has revealed no evidence of RECs in connection with the target property. No further assessment is recommended at this time.

We trust the information presented in this summary has provided you sufficient insight regarding the results of the environmental site assessment which was conducted for the Sheldon Farms property. Please contact me if I may be of further service to you.

Sincerely,
TETRA TECH EM INC.

JJ

Can you request him to fax a copy of the permit to your office? The fines are real steep if we don't comply in the time allowed to complete the well closure.

Is he OK without a $ deposit?

Tx Carl

Form **W-9**
(Rev. October 2007)
Department of the Treasury
Internal Revenue Service

Request for Taxpayer Identification Number and Certification

Give form to the requester. Do not send to the IRS.

Print or type
See Specific Instructions on page 2.

Name (as shown on your income tax return) ROBERT ALLEN NIX WELL DRILLING

Business name, if different from above

Check appropriate box: ☑ Individual/Sole proprietor ☐ Corporation ☐ Partnership
☐ Limited liability company. Enter the tax classification (D=disregarded entity, C=corporation, P=partnership) ▶
☐ Other (see instructions) ▶

☐ Exempt payee

Address (number, street, and apt. or suite no.) PO BOX 495 (9601 COSUMNES)

Requester's name and address (optional)

City, state, and ZIP code WILTON, CA 95693

List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on Line 1 to avoid backup withholding. For individuals, this is your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN* on page 3.

Note. If the account is in more than one name, see the chart on page 4 for guidelines on whose number to enter.

Social security number 569 : 78 : 1519

or

Employer identification number :

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me), and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding, and
3. I am a U.S. citizen or other U.S. person (defined below).

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the Certification, but you must provide your correct TIN. See the instructions on page 4.

Sign Here Signature of U.S. person ▶ [signature] Date ▶ 8-20-09

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),

2. Certify that you are not subject to backup withholding, or

3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.

The person who gives Form W-9 to the partnership for purposes of establishing its U.S. status and avoiding withholding on its allocable share of net income from the partnership conducting a trade or business in the United States is in the following cases:

- The U.S. owner of a disregarded entity and not the entity,

Subject: Sheldon Farms Pump
Re: Sheldon Farms Well

To All:

We have been cited by the City of Elk Grove for an old and abandoned water well pump. We have 30 days from June 1st to secure a permit and 60 days to complete the removal and sealing of the well. Penalties per the demand can be $10,000 per day.

I have given Robert Nix Well Drilling the go ahead to do the closure and have the well signed off by the City. Our cost is $7,800.

I hope you will agree with me that we must expedite the process to avoid being fined and will approve the work. The well has been on site for many years and until now no one has made issue with it. Old wells fall under the National Security Act, due to the fact the ground water can be poisoned or tainted with the access that a well provides.

Let me know if you have any questions.
Thanks Carl

Dear Ms. Friedlander:

SUBJECT: NOTICE TO COMPLY – ABANDONED WELL - SR0022140

The Sacramento County Environmental Management Department (EMD) has discovered an abandoned supply well at **0 Lewis Stein Road, Elk Grove, California 95758** (APN: 116-0012-059-0000). Sacramento County Code, Chapter 6.28 (Wells & Pumps) contains minimum requirements for the construction, modification, repair, inactivation, and destruction of wells and for the installation of pumps. Section 6.28.020 states: *"It shall be unlawful for the property owner to allow a nuisance, or abandoned well to exist on the property."* Section 6.28.010.P.1 defines an abandoned well as *"any well that has not been used for a period of one year, unless the owner demonstrates intention to use the well again by obtaining an inactivation permit."*

NOTICE TO COMPLY: You are hereby directed to obtain a permit for the inactivation, repair, or destruction of the aforementioned abandoned supply well, within 30 days of the date of this letter. You will have 60 days from the date of permit issuance to complete the permitted activity. Failure to comply with this Notice may result in formal enforcement action, including the imposition of administrative penalties of up to $10,000 per well, per day of violation.

You may access our ordinance, permit applications, and associated documents online at http://www.emd.saccounty.net/WP/EMDwells.htm. If you have any questions, please feel free to contact Susan Williams of my staff at (916) 875-8452.

Sincerely,

Alan Christie 875-8466

Subject: **SHELDON FARMS**
Sacramento County APN 116-0012-059
Sheldon Road & Lewis Stein Road, Elk Grove, California
Phase II Environmental Site Assessment

References:
1. Phase I Environmental Site Assessment for Sheldon Farms, prepared by Youngdahl Consulting Group, Inc., dated May 2016 (Project No. E16112.000).
2. Safety Data Sheet DF-2000 Fluid, ExxonMobil, dated 12 December 2014.
3. Executed Contract for Sheldon Farms Phase II, prepared by Youngdahl Consulting Group, Inc., dated 6 June 2016 (Project No. E16171.000).

Dear Mr. Jones:

In accordance with your authorization, Youngdahl Consulting Group, Inc. (Youngdahl) has performed a Phase II Environmental Site Assessment (Phase II ESA) for the Sheldon Farms Project located west of Lewis Stein Road and south of Sheldon Road in Elk Grove, California (Sacramento County APN 116-0012-059) (Fig. 1). The purpose of this Phase II Soil Investigation was to investigate the property for the potential presence of volatile organic compounds (VOCs) that may pose a threat through soil vapor intrusion. The scope of this assessment was to identify if contaminants from a former dry cleaner at the east adjoining property has created a soil vapor migration scenario by advancing four (4) soil vapor sampling rods at the east subject property boundary, downgradient from the location of the former drycleaner, and to collect soil gas samples to be analyzed for VOCs. Trace levels of hydrocarbon components of dry cleaning solvents were identified, but all values were below human health risk screening values for vapor intrusion. Youngdahl recommends no further action or investigation regarding the impacts of dry cleaning fluids on the Sheldon Farms property.

Preliminary Findings

Based upon our Phase I ESA (Reference No. 1), we identified the former Fresh and Save Cleaner located at 8112 Sheldon Road Suite 800 as a site with a recognized environmental condition (REC) adjacent to the subject property during completion of the EDR Vapor Encroachment Screen (Fig. 2). This site is considered to be a REC due to the presence of DF-2000, a dry cleaning fluid listed as "NAPHTHA (PETROLEUM), HYDROTREATED HEAVY" on the ExxonMobil Safety Data Sheet (Reference No. 2), and may contain volatile organic compounds (VOC) that may pose a threat through soil vapor intrusion. Though no dry cleaning solvent releases have been reported and no cleanup actions exist for this site, a soil vapor investigation was recommended to evaluate if a dry cleaner vapor encroachment condition (VEC), resulting from the solvents used at Fresh and Save Cleaner is present at the subject property. Evaluation of potential soil vapor contamination is especially important because soil vapor can spread much farther and with more affect than a groundwater plume.

Soil Vapor Investigation

On 16 June 2016, Youngdahl collected four (4) soil vapor samples (denoted S-1, S-2, S-3, & S-4) for the determination of VOCs (Fig. 2). The samples were analyzed using EPA method TO-

15 (the determination of VOCs in air collected in specially-prepared canisters and analyzed by gas chromatography/mass spectrometry). Four one-inch outer diameter, steel rods were advanced by TEG Northern California (TEG) using direct-push drilling methods to approximately 4.9 feet below ground surface following California Department of Toxic Substances Control (DTSC) protocols (see attached standard operating procedures). The rods were retracted and inert tubing was inserted to the bottom of the boring. Sand pack was poured into the bore hole followed by hydrated bentonite to limit the migration of surface air down the outside of the tubing. The borings were left to equilibrate for a minimum of two hours. A volume of approximately 154 cm^3 (equivalent of three internal dead volumes) was purged from each boring and tested for leaks. Vapor samples were then collected using summa canisters for off-site analysis.

At the completion of sampling activities, the samples were transported to Eurofin Air Toxics in Folsom, CA (California State ELAP No. 2820) under chain-of-custody protocols. The samples were analyzed using EPA method TO-15 (the determination of VOCs in air collected in specially-prepared canisters and analyzed by gas chromatography/mass spectrometry). The Laboratory report is provided as an attachment to this report.

Discussion of Analytical Results

The San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) developed the Environmental Screening Levels (ESLs), a series of lookup tables using a tiered approach that reflect concentrations of hazardous chemicals at which they consider to be the thresholds of concern for risk to human health. These tables include conservative concentrations of a contaminant that may pose a chemical threat to a site in reference to human health risk.

Below is a summary table of analytes detected in the four samples to be above laboratory reporting limits with a comparison to their respective Residential ESLs.

Sample	Compound	Reporting limit (ug/m3)	Amount Detected (ug/m3)	Residential ESLs (ug/mg3)
S-1	Ethanol	8.8	15	-
	Acetone	28	62	15,000,000
	Carbon Disulfide	14	29	-
	Hexane	4.1	5.1	-
	2-Butanone (Methyl Ethyl Ketone)	14	19	2,600,000
	Benzene	3.7	10	48
	Heptane	4.8	5.8	-
	4-Methyl-2-pentanone	4.8	26	210,000
	Toluene	4.4	19	160,000
	Ethyl Benzene	5.0	6.0	560
	m,p-Xylene	5.0	17	52,000
S-2	Acetone	28	60	15,000,000
	Carbon Disulfide	15	43	-
	Hexane	4.2	8.9	-
	2-Butanone (Methyl Ethyl Ketone)	14	24	2,600,000
	Benzene	3.8	11	48
	Heptane	4.9	9.8	-
	4-Methyl-2-pentanone	4.9	28	210,000
	Toluene	4.5	18	160,000
	m,p-Xylene	5.2	12	52,000
S-3	Benzene	4.5	9.7	48
	4-Methyl-2-pentanone	5.8	48	210,000
	Toluene	5.3	10	160,000

	m,p-Xylene	6.1	7.3	52,000
S-4	Acetone	30	47	15,000,000
	Benzene	4.0	13	48
	4-Methyl-2-pentanone	5.2	23	210,000
	Toluene	4.8	6.0	160,000

Conclusion and Recommendations

No chemicals of concern exceeded the residential ESLs. There has been a detection of constituents of concern which suggests a release occurred in the vicinity of the subject property. Although reporting limits have been exceeded, they are below the SFBRWQCB Residential ESLs for soil gas and no further assessment is recommended.

Limitations

This assessment for soil gasses was performed meeting or exceeding the standards of practice for a screening level soil gas investigation common at the time of the investigation and for the geographic vicinity of the investigation. No warranties are expressed or implied. Please feel free to contact us with any questions regarding this assessment.

Very truly yours,
Youngdahl Consulting Group, Inc.

Eurofins Air Toxics, Inc. Sample Receipt Confirmation Cover Page

Thank you for choosing Eurofins Air Toxics, Inc. (EATL). We have received your samples and have listed any Sample Receipt Descrepancies below.

In order to expedite analysis and reporting, please review the attached information for accuracy.

For corrections call: **Air Toxics, Ltd. at 916-985-1000**

EATL will proceed with the analysis as specified on the Chain of Custody (COC) and Sample Receipt Summary page.

Please note : The Sample Receipt Confirmation, including the total workorder charge, is subject to change upon secondary review. Our aim is to provide a confirmation to you in a timely manner. Sample Receipt Discrepancies, if any, may not include discrepancies regarding sample receipt pressure(s). Additionally, the COC will be provided with the final report.

Soil Vapor Sampling and Analysis

Standard Operating Procedures

TEG-Northern California, Inc.

August 2015

Soil Vapor Sampling

Soil vapor is withdrawn from the tubing that runs from the sampling tip to the surface using a 50 cubic centimeter (cc) glass syringe connected via an on-off valve. The sampling point, including the tubing, is nominally purged of three internal dead volumes. A sample of in-situ soil vapor is then withdrawn and immediately transferred to the mobile lab for analysis within minutes of collection. The use of small calibrated syringes allows for careful monitoring of purge and sample volumes. This procedure ensures adequate sample flow is obtained without excessive pumping of air or introduction of surface air into the sample.

For off-site analysis, samples are collected in canisters or in Tedlar bags when allowed. Samples collected in Tedlar bags for VOC analysis are either analyzed on the same day or transferred to a canister.

Use of Tracer Compound to Ensure Probe Seal Integrity

A tracer compound, typically 1,1 difluoroethane (1,1 DFA), iso-propanol (IPA), or hexane is used to test for leaks around the sampling point installation at the ground surface and in the sampling system. The tracer compound is placed under a shroud covering the sample point during sample collection. If the tracer compound is detected, the sampling point is inspected for vacuum integrity, and if necessary, the sample point is reinstalled and another sample is collected.

Sample Flow Rate

Sample collection is timed so that the flow rate does not exceed 200 milliliters per minute. If the mobile lab is on site, this is accomplished by withdrawing the plunger on the syringe at a constant rate of 3 milliliters per second. The collector notes the collection time on a log sheet, and also records any resistance to sample flow that is felt on the syringe during collection. If Summa canisters are used to collect the soil vapor, a flow controller attached to the Summa canister is utilized to maintain a flow rate of 200 milliliters per minute or less.

teg

Analytical Methodology

The typical analytical protocols TEG uses fulfills the specific EPA analytical methods used and the most recent CA-EPA (DTSC), LA-RWQCB, and SF-RWQCB *Advisory – Active Soil Gas Investigations* (July 2015) (the advisory documents). These methods include analyses for Volatile Organic Compounds (VOCs) by EPA 8260, fixed gases (e.g. oxygen, carbon dioxide, and methane) by GC/TCD, and TPH-diesel by EPA mod8015.

Reporting Limits

Typical reporting limits are outlined below:

Compound	Detector	Report Limit
VOCs by 8260B	Mass Spec	1.0 to 0.01 ug/l-vapor
Methane	FID or TCD	1000 ppmv
Fixed Gases	TCD	1% by vol
H2S	Gold Film	0.10 ppmv

Injection of Soil Vapor Samples

Soil vapor samples from the sampling syringe are injected with surrogates into a purge & trap instrument for VOC analysis. Separate aliquots are directly injected into gas chromatographs for fixed gases and methane analysis, and other methods.

Laboratory Data Logs

The field chemist maintains injection and sample analysis records including date and time of analysis, sampler's name, chemist's name, sample ID number, concentrations of compounds detected, calibration data, and any unusual conditions.

teg

Quality Control Procedures

Sample Quality Control

Each sample is given a unique identification number specifying location and depth. Purge and sample volumes are monitored closely using small calibrated syringes to assure a proper flow of soil gas. This ensures a representative sample is obtained from the sample zone without excessive pumping, which could result in sampling of surface air.

Continuing Calibration (Daily Mid-point Calibration Check)

Mid-point calibration standards are analyzed at the beginning of each day. When calibration checks fall outside the acceptable range, corrective action is performed. This may include verification of the calibration standards, and performing a new calibration curve by the on-site chemist for the analytes in question.

Method Blanks

Method blanks are performed at the start of each day by drawing clean air through the sampling equipment and analyzing. These blanks verify all components of the sampling and analytical system are free of contamination. Additional blanks are performed more often as appropriate depending upon the measured concentrations, generally at a minimum 1 every 20 samples. Blank analyses are typically recorded in the data tables. If a blank shows a measurable amount of any target compound, the on-site chemist will investigate and determine the source, and resolve the contamination problem prior to analyzing any samples.

Duplicate Samples

A duplicate (repetitive) analysis of a sample is typically performed daily and at least one every 20 samples. Additionally, a duplicate analysis is performed when inconsistent data are observed. Because soil vapor duplicates can vary widely, nominal relative percent difference (RPD) acceptance criteria is $\pm$ a factor of 2.

Corrective Action

To minimize the potential for cross-contamination between sampling points, all sampling equipment is cleaned with solvents, potable water, or replaced, as appropriate. Sampling syringes are baked in an oven, or, if disposable, discarded. Corrective action is taken when unexpected contaminant levels are detected in the analytical instruments in the mobile lab. The instruments are inspected, cleaned, repaired, and additional blanks run, as needed.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/31/2017 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Description: The Obie's Dump (Site) includes a portion of the property located at Sheldon Road, Elk Grove, Sacramento County, California 95624. The approximate1.5 acre portion of the property was once an excavated area used as a "borrow site", landfill and burn dump known as Obie's Dump. The area is now a crescent shaped depression along the east boundary of the property. In a letter dated March 21, 1992, the SCEHD identified that the site was in noncompliance of the Mitigation Monltorinq and Reporting Program. The SCEHD as the Local Enforcement Agency (LEA) is responsible for solid waste permitting, inspection, enforcement and the regulation of closed disposal sites. In subsequent complaints of illegal dumping of debris and household waste, the LEA inspected and issued a Notice of Violation to the property owner. At the request of the property owner and in anticipation of future development of the property, LEA staff agreed to provide regulatory oversight and guidance of the proposed Site investigation. With this oversight, the property owner completed an investigation work plan and conducted soil trenching and sampling. The results of the Site investigation are reported in the May 12, 2003, Landfill Characterization and Environmental Sampling Report. The results show that there is lead in soils above the California Code of Regulations Total Threshold Limit Concentration which defines a toxic characteristic hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

AGRICULTURAL PROPERTY
SHELDON ROAD AT BRUCEVILLE ROAD
ELK GROVE, CA 95758

TARGET PROPERTY COORDINATES

Latitude (North):	38.436053 - 38˚ 26' 9.79''
Longitude (West):	121.414467 - 121˚ 24' 52.08''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	638384.8
UTM Y (Meters):	4255181.5
Elevation:	25 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5619710 FLORIN, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 25 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06067C0316H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06067C0308H	FEMA FIRM Flood data

06067C0317H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
FLORIN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: SAN JOAQUIN

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
2	22 inches	27 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 7.8 Min: 6.1
3	27 inches	53 inches	indurated	Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:
4	53 inches	59 inches	stratified sandy loam to loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 6.1

Soil Map ID: 2

Soil Component Name: GALT

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.3 Min: 6.1
2	12 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

APPENDIX H

Site Owner Questionnaire

The following questions are for (1) the current owner of the property, (2) any major occupant of the property or, if the property does not have any major occupants, at least 10% of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing, or disposing of hazardous substances or petroleum products on or from the property. A major occupant is any occupant using at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multi-family property containing both residential and commercial uses, residential occupants do not need to respond to this questionnaire unless they are involved in or have knowledge of the commercial or other uses.

Description of Site: Address:

Approximately 79.15 acres of vacant unimproved land, located in the City of Elk Grove, County of Sacramento ("**County**"), State of California, commonly known as Sacramento Assessor's Parcel Numbers 116-0012-051 and 116-0012-059

Question	Owner			Occupants (if applicable)		
1a. Is the property used for an industrial use?	Yes	No	Unk	Yes	No	Unk
1b. Is any adjoining property used for an industrial use?	Yes	No	Unk	Yes	No	Unk
2a. Have you observed evidence of or do you have any knowledge that the property has been used for an industrial use in the past?	Yes	No	Unk	Yes	No	Unk
2b. Have you observed evidence of or do you have any knowledge that any adjoining property has been used for an industrial use in the past?	Yes	No	Unk	Yes	No	Unk
3a. Is the property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk
3b. Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk
4a. Have you observed evidence of or do you have any knowledge that the property has been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk

Question	Owner			Occupants (if applicable)		
4b. Have you observed evidence of or do you have any knowledge that any adjoining property has been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk
5a. Are there currently any damaged or discarded automotive or industrial batteries, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes	No	Unk	Yes	No	Unk
5b. Have you observed evidence of or do you have any knowledge that there have been previously any damaged or discarded automotive or industrial batteries, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes	No	Unk	Yes	No	Unk
6a. Are there currently any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes	No	Unk	Yes	No	Unk
6b. Have you observed evidence of or do you have any knowledge that there have been previously any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes	No	Unk	Yes	No	Unk
7a. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that originated from a contaminated site?	Yes	No	Unk	Yes	No	Unk
7b. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that is of an unknown origin?	Yes	No	Unk	Yes	No	Unk
8a. Are there currently any pits, ponds, or lagoons located on the property in connection with waste treatment or waste disposal?	Yes	No	Unk	Yes	No	Unk
8b. Have you observed evidence of or do you have any knowledge that there previously have been any pits, ponds, or lagoons located on the property in connection with waste treatment or waste disposal?	Yes	No	Unk	Yes	No	Unk
9a. Is there currently any stained soil on the property?	Yes	No	Unk	Yes	No	Unk
9b. Have you observed evidence of or do you have any knowledge that there previously has been any stained soil on the property?	Yes	No	Unk	Yes	No	Unk

Question	Owner			Occupants (if applicable)		
10a. Are there currently any registered or unregistered storage tanks (above or underground) located on the property?	Yes	No	Unk	Yes	No	Unk
10b. Have you observed evidence of or do you have any knowledge that there previously have been any registered or unregistered storage tanks (above or underground) located on the property?	Yes	No	Unk	Yes	No	Unk
11a. Are there currently any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No	Unk	Yes	No	Unk
11b. Have you observed evidence of or do you have any knowledge that there previously have been any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No	Unk	Yes	No	Unk
12a. Are there currently any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No	Unk	Yes	No	Unk
12b. Have you observed evidence of or do you have any knowledge that there previously have been any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No	Unk	Yes	No	Unk
13a. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?	Yes	No	Unk	Yes	No	Unk
13b. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that the well has been designated as contaminated by any government/health agency?	Yes	No	Unk	Yes	No	Unk
14. Do you have any knowledge of environmental liens of governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
15a. Have you been informed of the past existence of hazardous substances or petroleum products with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
15b. Have you been informed of the current existence of hazardous substances or petroleum products with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk

Question	Owner			Occupants (if applicable)		
15c. Have you been informed of the past existence of environmental violations with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
15d. Have you been informed of the current existence of environmental violations with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
16. Do you have any knowledge of any environmental site assessment of the property or facility that indicated the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property?	Yes	No	Unk	Yes	No	Unk
17. Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substances or petroleum products involving the property by any owner or occupant of the property?	Yes	No	Unk	Yes	No	Unk
18a. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a stormwater sewer system?	Yes	No	Unk	Yes	No	Unk
18b. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a sanitary sewer system?	Yes	No	Unk	Yes	No	Unk
19. Have you observed evidence of or do you have any knowledge that any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the property?	Yes	No	Unk	Yes	No	Unk
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are records indicating the presence of PCBs?	Yes	No	Unk	Yes	No	Unk

Unk – "unknown" or "no response"

Additional Questions

A) Describe the current use of the property.

Vacant land / farm

B) How long has the property been used for this purpose?

MORE Than 50 years

C) How long have you owned the property?

MORE than 50 years

D) List the existing structures on the property and their age.

NONE

E) Describe the past uses, owners, and operators of the property. (Be as detailed as possible and note approximate time periods.) NO REPY GIVEN

N/A

F) Do any environmental documents exist for the Site such as environmental site assessment reports, environmental compliance audit reports, environmental permits, registrations for storage tank or any other environmentally related documents for the property?

Phase II Environmental Site Assessment by Youngdahl, dated July 5, 2016.

This questionnaire was completed by:

Name	Allen D. Hine	
Title	Attorney	
Address	3126 O Street	
	Sacramento 95816	
Phone number	Phone: 916-457-8800	
Date	hinead@poacbell.net	

The answers to this Site Owner Questionnaire have been prepared by Allen D. Hine, the attorney for the owners of the property for the exclusive use of Geocon Consultants, Inc. in the course of their preparation of an environmental site assessment for the above described property. No other person shall be entitled to use or rely upon the answers to this Questionnaire. All such answers are limited to matters within Allen D. Hine's current, actual knowledge, without inquiry or investigation and no such inquiry or investigation is implied. All such answers are provided for information purposes only and are not (i) a substitute for Geocon Consultant's review of the property (ii) representations or warranties of the accuracy or completeness of the ultimate facts underlying such answers.; and (iii) are not an amendment or supplement to any representations or warranties contained in the Purchase and Sale Agreement between the property owners and Anthem United. In no event shall Allen D. Hine nor any of the property owners have any liability to Geocon Consultants, Inc., Anthem United Communities, Inc nor any other recipient of this Questionnaire for any inaccuracy, incompleteness of answers to the Questionnaire or any inaccuracy, error, or omission in any environmental assessment prepared in reliance in whole or in pat on the answers to this Questionnaire.

Nicole Hastings
Geocon Consultants
3160 Gold Valley Dr. Suite #800
Rancho Cordova, CA 95742

Project Name: Sheldon Ranch

Enclosed are the results of analyses for samples received by the laboratory on 10/16/17 13:28. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that the results are in compliance both technically and for completeness.

Analytical results are attached to this letter. Please call if we can provide additional assistance.

Sincerely,

James Liang, Ph.D.
Laboratory Director

Notes and Definitions

QM-1	The spike recovery was outside acceptance limits for the LCS or LCSD. The batch was accepted based on acceptable MS/MSD recoveries & RPD's.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
