FUTURE PHASE AFRICA EXPANSION

PHASE 1C

Phases 1A and 1B will focus on the core Zoo, including the entry and giraffe lodge, animal care, the savanna, and iconic species including lion, cheetah, gelada, and okapi. Ideally Phases 1A and 1B will be built together, but available funding could limit work to Phase 1A.

Phase 1C would complete the African zone with hippo, additional rhino yard, wild dog and hyena, and an African ape.

Phase 2 would add California, including otter, big horn sheep, fish, eagle, grizzly bear, and, yes... elk!

Phase 3 would relocate the staff office from modular space (from Phase 1A) into an administration building next to the entry plaza, freeing up space for Phase 4.

Phase 4 is Australasia and includes a wide range of species such as wallaby, Komodo dragon, red panda, clouded leopard, tiger, and an Asian ape.

The phasing may occur in a linear order (1-2-3-4) or could jump around (e.g., 1A-2-1B-3-1C-4), based upon fundraising.
