

SIMPLE TOOL BELT

Materials Needed:

- Construction Paper (Any Color/Variety of Colors)
- Crayons or markers
- Scissors
- Tape

How to make your tool belt:

Start by measuring your waist. Cut long ways of the construction paper to create a belt that will fit your waist (you will probably have to cut out 2 or three) and tape them together. See example below for reference.

Trace or draw a hammer, wrench, screwdriver, and/or saw on construction paper. Cut out these tools and tape them to your belt. Feel free to color with crayons or markers before or after you have taped them to your belt. Once you have completed your custom tool belt, it's time to get to work!
